My training and interests lie at the intersection of social psychology, neuroscience, and positive psychology. Over the past decade, my research has focused on developing and testing innovative psychological interventions to positively transform our relationships to others and the world. In my postdoctoral research, I attempt to reduce affective polarization by appealing to shared social identities. I am also passionate about open science, reproducible science, metascience, and data science using R (this CV was made in R).

Visualization Dashboards I Developed

The Missing Majority Dashboard is an open-access platform that tracks representation of Global South authors and samples across leading behavioral science journals. Drawing on data from nearly 60 journals and over 100,000 articles, the dashboard uses author affiliations and sample locations to quantify disparities. Articles are manually coded using a transparent protocol, and data is visualized with country-level granularity. It offers a replicable model for tracking representation in science and supports calls for more equitable and inclusive research practices. It also demonstrates the extent of the Global South gap in behavioral science and enables empowers institutions, journals, and researchers to benchmark and improve their equity efforts.

Academic Service

Core team member of *easystats* (seven members; official start date: 2022-08). The *easystats* project aims to increase the adoption of good statistical practices through open science tools, for example through a collection of R packages that provide a unifying and consistent framework around statistics. This responsibility involves writing code to improve the various R packages associated with the project and participating in the general decision-making. At this time, the *easystats* packages have collectively been downloaded over 20 millions times. Available from: <https://easystats.github.io/easystats/>
