My training and interests lie at the intersection of social psychology, neuroscience, and positive psychology. Over the past decade, my research has focused on developing and testing innovative psychological interventions to positively transform our relationships to others and the world. In my postdoctoral research, I attempt to reduce political polarization by appealing to shared social identities. I am also passionate about open science, reproducible science, metascience, and data science using R (this CV was made in R too).

Academic Service

Core team member of *easystats* (seven members; official start date: 2022-08). The *easystats* project aims to increase the adoption of good statistical practices through open science tools, for example through a collection of R packages that provide a unifying and consistent framework around statistics. This responsibility involves writing code to improve the various R packages associated with the project and participating in the general decision-making. At this time, the *easystats* packages have collectively been downloaded over 20 millions times. Available from: <https://easystats.github.io/easystats/>
